PLATINUM

DIGITAL WATER IONIZER

What is the size of the unit? _____

The size of the unit is 13.58"H x 9.44"W x 5.9"D.

What is the weight of the unit? _____

The weight of the unit is 11.24.

How much water does it produce? _____

The ionizer produces 2.5L per minute or 2 gallons every three minutes.

How long does it take to produce alkaline water? _____

You can produce alkaline water instantly and continuously. We recommend using a slower flow rate because the longer the contact time in filtration and electrolysis stage, the better.

How many stages of filtration does the unit have? _____

The ionizer has seven stages available for efficient elimination of impurities. It includes seven PH settings, two acidic and one neutral.

PRODUCT FEATURES	CUSTOMER BENEFITS
Produce Strong Antioxidant Water Typically Exceeding - 500mV	Antioxidants are considered beneficial because they slow the chemical process of oxidation or aging.
Features Platinum-coated Titanium Electrodes	These electrodes are made of the finest quality materials in the world which means a lifetime of reliability and worry free maintenance.
7 Stage Filter Cartridge with electronic integrated filter recognition.	Provides peace of mind by eliminating harmful impurities while keeping beneficial minerals necessary for ionization. Electronic cartridge recognition assures you'll always be using 100% factory authorized filters.
Innovative reverse polarity self cleaning system	Allows for continuous, uninterrupted production of ionized water. Eliminates waste and prevents scaling, thereby extending lifespan of electrodes.
Auto change color LCD panel	At a glance, allows user to confirm pH level, filter life, water temperature, inflow rate, and all important diagnostics.
Built-in water control valve	Allows for the most precise adjustment of water inflow to maximize pH results.
Unique fold-down, rotating dispenser	Stunning design also reduces overall footprint of unit. Consumes less space.
State of the art self-diagnostic system	Unit shuts off automatically when water inflow is too low or water temperature is too high, preventing internal damage to the unit.
Voice supported alerts	Indicates which setting or process is occurring in a pleasant voice.
